

Company Profile

Muhlenberg College is a small private college with 2,200 students is located in Allentown, PA.

The Situation

Muhlenberg has many building to support with limited manpower. They were changing link/panel pre filters quarterly (4 times per year) and final filters bi-annually (2 times per year). Due to the limited manpower this made filter changing very difficult and time consuming.

The Action

General Aire proposed a test to replace the link/panel filters with high capacity pleated prefilter. The air handlers using final filters were set up with these filters upstream of the coils. So, Hi-Flo ES pocket filters were recommended. With the one year guarantee Muhlenberg was willing to give it a try.

The Results

Testing showed that the Camfil high capacity AP-IV will last 8 months. The High Flo ES is over one year. Muhlenberg now has the time to get the filters changed in a timely matter now that it's only done every 8 months.

The Proof

Muhlenberg College was able to lower stock items to close to nothing. Changing filters at 8 months has freed up manpower for other chores. Everyone is happy.
